

## Quick guide

Read the operating instructions before operating the appliance. Pay particular attention to the safety instructions!

## Speed settings

- 0:** Appliance is switched off.
- I:** For chopping and mixing soft and liquid ingredients.
- II:** For chopping and mixing more solid and liquid ingredients.
- P:** For short, powerful pulse operation (pulse function). To prevent overloading the motor, the speed switch will not click into place in this setting. Hold the speed switch in this position for short periods only.

## Using the appliance

*Firmer fruits or food may be only processed in this appliance if there is also liquid in the blender jug. Always use the pulse function when you process firm foods.*

*Never use the appliance continuously for more than one minute.*

Fill the blender jug.

Check that the sealing ring is correctly seated in the blade holder. Then place the blade holder on the blender jug so that the blade extends into the blender jug and screw the blade holder firmly in place.

Turn the blender jug (with the screwed-on blade holder) over.

Now place the blade holder along with the attached blender jug onto the base so that the arrow on the blade holder is pointing to the  symbol on the base. Then turn the blade holder so that the arrow on the blade holder points to the  symbol on the base. The blade holder must audibly click into place so that it sits firmly on the base.

Set the speed switch to the required speed and wait until the smoothie has reached the desired consistency.

Set the speed switch to "0".

When the smoothie is ready, turn the blade holder until the arrow on the blade holder points to the  symbol on the base and remove the blade holder with the attached blender jug.

Turn the blender jug over and unscrew the blade holder.

The smoothie is now ready!

- You can also use this appliance to crush ice cubes: (large blender jug: max. 80 g/approx. 5 - 7 ice cubes, press the pulse button approx. 20 times/small blender jug: max. 50 g/approx. 3 - 5 ice cubes, press the pulse button approx. 10 times). Always use the pulse function when you process whole ice cubes. Generally, however, we recommend that you use pre-crushed ice in this appliance.
